DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-9 rejected under 35 U.S.C. 102(b) as being anticipated by Mazelsky et al. U. S. Patent No. 3,224,265.

Regarding claims 1-9, Mazelsky et al. discloses a flutter test model comprising: an elastic spar that simulates an elasticity of an actual wing (C2 L6-8 and Fig 1); a plurality of wing elements that simulate an external shape of the actual wing, the plurality of wing elements being fixed along the elastic spar so as to form a test wing; and connecting means for connecting the wing elements to the elastic spar, the connecting means being disposed within the wing elements, wherein the connecting means are interior to an exterior surface of the test wing (Fig 1). Furthermore, the connecting means comprising: an anchor member that is fixed to the elastic spar; and a bolt that fixes a wing element of the plurality of wing elements to the anchor member, the wing element being fitted around the elastic spar and the anchor member from a wing tip side, and the bolt passing through the wing element from the wing tip side and being fastened to the anchor member, wherein one of the wing element and the anchor member includes a weight disposed within a weight support hole is implicitly disclosed by Mazelsky et al. (see for example Fig 1, C2 L58-68 and C3 L15-18)

Citation of Pertinent Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to further show the state of the art with respect to flutter test model:

- a. U.S. Pat. No. 4,372,159 to Doggett, Jr. et al., which discloses aeroelastic instability stoppers for wind tunnel models.
